5 years
Guarantee
Electric and
electronic components

Rointe had tested independently over 24 hours its 75 litres 2.000W RD Series water heater over 24 hours, with the temperature set to 80°C and with a water usage profile of 120 litres/day.

Thanks to its **Optimizer Energy Plus**, the results obtained were a 20% equivalent ratio of consumption compared with its nominal power.

Rointe RD Series has a touch panel, allowing the user to control the device in an easy and intuitive way.

From the panel you can select the temperature of the water and, at first sight, know: the currently selected temperature (from anti-frost to 80°C), the hot water availability, the working mode (on or stand-by), if the heating element is working and if the water heater is programmed (through the M Series remote control).

Programmable Power

Now all the Rointe range of products is programmable through the M Series infrared remote control. This bi-directional device will allow you to programme 7 days a week, 24 hours a day, the functionality of your water heater, selecting its working mode and the water temperature depending on your own needs. Thanks to this feature you will increase your comfort and optimize to the maximum the energy consumption. Programme and save time, water and energy.

Total Safety

Legionnaires' disease is a potentially fatal form of pneumonia which can affect anybody, but which principally affects those who are susceptible because of age, illness, immunosuppression, smoking, etc. Our RD Series is designed with safety in mind, and all the anti legionnaires' disease regulations are complied with.

ACCESSORIES

INSTALLATION KIT

Available for all models, it includes all the accessories necessary. There are three different kits, depending on the size of the model to install.

| Reference | KITRD01 | KITRD02 | KITRD03 |
|--------------------|----------------|----------------|---------|
| For sizes (litres) | RD1050, RD1075 | RD1100, RD1150 | RD1200 |

SUPPORT TRIPOD

Available for all models, it is very recommended to improve stability due to the high weight of the water heaters when full.

HOW DOES IT WORK?

SANITARY HOT WATER FOR A COMFORTABLE HOME

THE COMFORT OF SANITARY HOT WATER

Keeping the water within the heater at a set temperature depends on many factors such as location, materials, insulation and controllability.

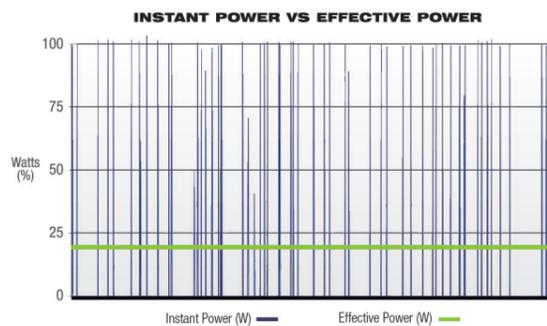

The Rointe water heaters have installed the exclusive technology Optimizer Energy Plus that ensures a stable interior water temperature in the periods between water usage.

EFFECTIVE POWER

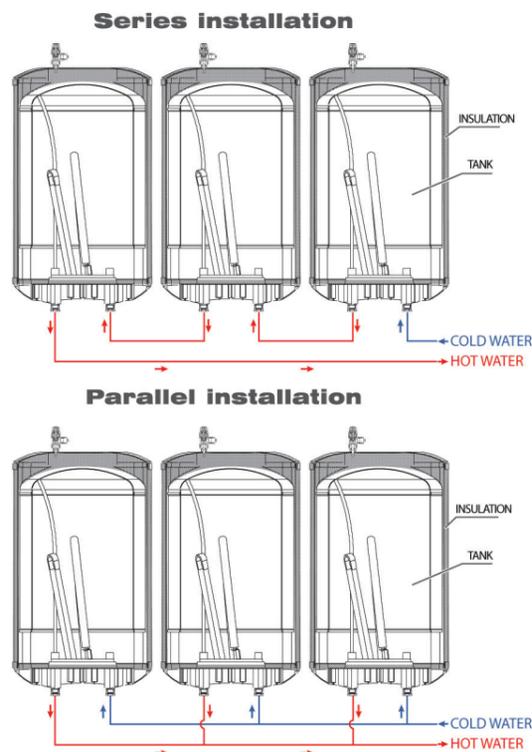

The independent tests made which simulated normal working conditions drawing 120 litres over the day, resulted in a consumption of only 20% of the nominal power. That is what we define as the equivalent ratio of consumption.

If we multiply the nominal power by the equivalent ratio of consumption the result is the effective power.

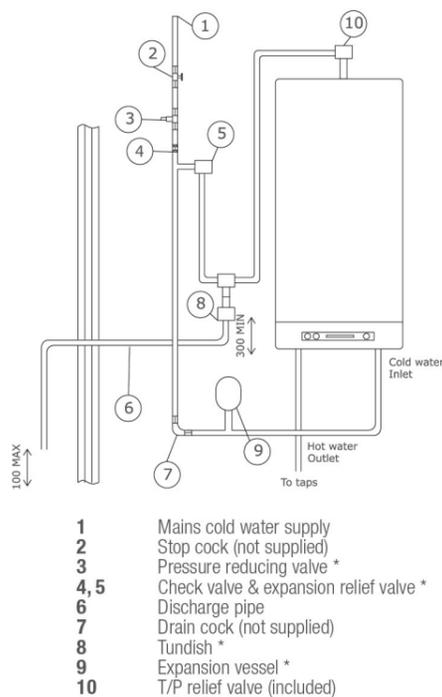

INSTALLATION DIAGRAMS

Where there is an increased hot water requirement, it is possible to install the Rointe water heaters in parallel, or in series. When we have an installation in parallel, we have the advantage of a greater hot water capacity, while with an installation of heaters in series we have the advantage of a reduced use of the heating elements within each heater.

Connection arrangement

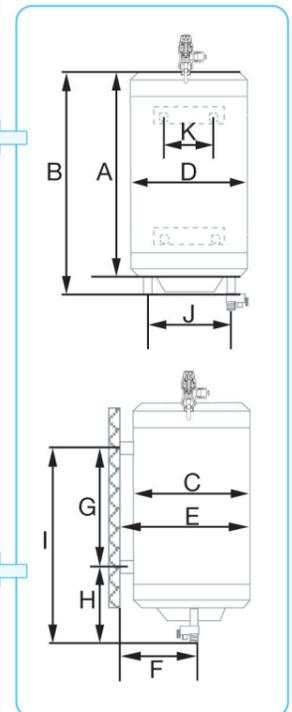

* Illustrative diagrams, only for guidance; for a correct installation please refer to Ireland regulations.
