

ELECTRIC RADIATORS

This chart is to be used as a guide only, for a more accurate guide we would need more information including your actual W/m³k values.

The table below shows which Elnur Storage Heaters in Kwatts is best suited for the area you're looking to heat. All you need to use this guide is the floor area and outside wall length to calculate your heaters. We have assumed medium construction and dwelling insulation and the following W/m³k values, ext.walls 1.50, floors 0.75, roof insulation 0.31, glassed areas 2.90 and average external temperatures of -2°C. Selections that are over 2000 will require two heaters. We accept no responsibility for any heaters sized incorrectly while using this guide. It is the customer's responsibility to confirm the W/m³k values are suitable.

Floor Area m ³	Temp. to obtain °C	TOTAL LENGTH OF OUTSIDE WALL (Meters)												
		0m	1m	2m	3m	4m	5m	6m	7m	8m	9m	10m	11m	12m
